**Description**

The SKY13317-373LF is a GaAs pHEMT single-pole, triple-throw (SP3T) antenna switch that operates in the 20 MHz to 6.0 GHz frequency range. Switching between the antenna (RFC signal) and the RF1, RF2, and RF3 ports is accomplished with three control voltages.

The low loss, high isolation, high linearity, small size, and low cost make this switch ideal for all WLAN and devices that support Bluetooth® signals operating in the 2.4 to 2.5 GHz and 4.9 to 5.9 GHz bands.

The SKY13317-373LF is manufactured in a compact, 1.5 x 1.5 mm, 8-pin Micro Leadframe (MLP) package. A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

**Note 1:** Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

## Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY13317-373LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

**Note:**  $C_{BL} = 47\text{ pF}$  for >500 MHz operation;  $220\text{ pF}$  for 50 to 500 MHz operation.  
Higher values recommended for lower frequency operation.  
Exposed paddle must be grounded.

Use  $10\text{ nF}$  blocking capacitors ( $C_{BL}$ ) for <50 MHz operation.
